ALKALINE SPORTS WATER PITCHER

- 9+ pH
- Hydration
- Performance
- Recovery

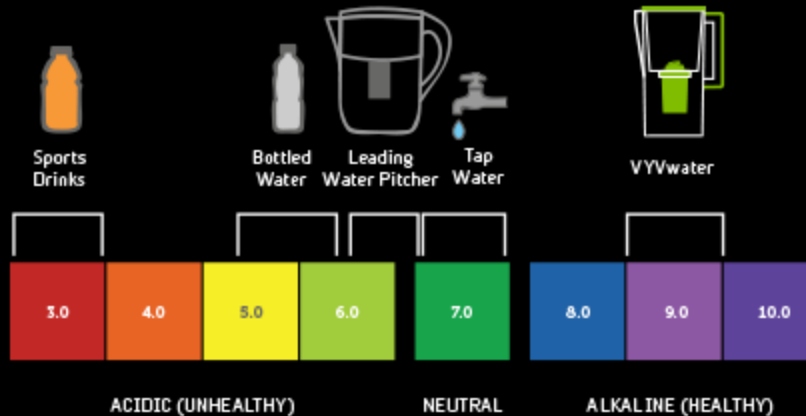

Each VYVwater filter cartridge helps save the environment by reducing the need for hundreds of plastic bottles, many of which end up in our landfills.

VYVwater performs like a sports drink without the sugar, calories or additives. Our rapid hydrating formula is non-bloating and enhanced with electrolytes, allowing you to train harder and longer. VYVwater's optimal pH properties combat lactic acid build up which means faster recovery times, reduced cramping, and better overall performance. Drink. Perform. VYV.

WHY PH IS IMPORTANT...Why Alkaline?

Overworked, poorly nourished, and stressed bodies tend to become more acidic over time - this is known as acidosis.

Acidosis has been associated with many common chronic health issues.

The alkaline properties of VYVwater contribute to the balancing of the pH levels of the fluids in your body to what nature intended.

Balancing your body's pH can improve performance by countering the effects of lactic acid. pH measures how acidic or alkaline a liquid is. When the pH is less than 7, it's acidic, while a pH of greater than 7 is alkaline. Lactic acid build up can lead to cramping, exhaustion and even weight gain. VYVwater is alkaline pH optimized to help combat lactic acid build up and restore the body's natural balance.

VYV Water is an affordable way to experience alkaline water without spending thousands.

- Compact design to fit in refrigerator doors.
- No clutter or installation required like counter top or under counter water ionizers.
- Portable for the office and travel.

Simply fill the top reservoir with water from your faucet and the water will flow through a combination carbon filter and mineral cartridge to fill the pitcher with fresh, clean, mineral rich alkaline water.

Performance: pH 8.5 - 9.5 : ORP -150 to -300 mV (ranges due to source water variations)

Filter life: Approx. 150 Liters. 2-3 months based on normal usage

Reservoir size: 42 oz - kid and bicep friendly
